RODOPELL

Reg. U. S. Pat. Office

Protects Bulb Plantings

against ravages of rats, mice, moles and other destructive rodents. Rodopell is a new material so highly distasteful to rodent pests that they refuse to go near it in their search of food. Three years of study in laboratories and in the plantings of nationally known bulb growers have shown that damage by rodents is wholly eliminated when Rodopell is used.

How to Use Rodopell

It does not kill rodents but drives them away from the plantings. It is harmless to pets and birds.

Rodopell is simple to use. It is only necessary to scatter a small amount (about one heaping tablespoonful — more is harmless) around each bulb at planting time.

For small plantings done with a trowel drop a pinch of Rodopell in the bottom of the hole; set the bulb; partially cover the bulb with soil; then scatter more Rodopell around the bulb to ring it; and cover as usual.

For large plantings where the bed is dug out, scatter Rodopell lightly over the bottom of the bed; set the bulbs in place; spread a small amount of soil to partially cover the bulbs; scatter more Rodopell around the bulbs and cover as usual.

Rodopell is —

Harmless to bulbs.

Non-Poisonous.

Harmless to other vegetation.

Clean and pleasant to use.

Odor pleasant to humans—distasteful to rodents.

Packed in two sizes—

2 gallon size sufficient for 100 bulbs.

5 gallon size sufficient for 250 bulbs.

Recommended for all bulbs liable to be eaten by rodents.

For your convenience in applying Rodopell it is impregnated on high grade peat moss which aids in preparing the bulb bed.

Rodopell sufficient for 100 bulbs — \$2.00

Rodopell sufficient for 250 bulbs — 3.75
